

# DoS ile Mücadele

written by Mert SARICA | 1 March 2019

2009 yılından bu yana "Bilgi güçtür ve paylaşıldıkça artar!" sloganıyla siber güvenlik alanına meraklılar için özveriyle yaşatmaya çalıştığım blogum bundan yıllar yıllar önce bir DDoS saldırısı ile karşı karşıya kaldığını ve daha sonrasında blogumu Cloudflare arkasına taşıdığımı anımsıyorum. Son birkaç yıldır ise DDoS ve DoS benzeri bir saldırı ile karşılaşmamış olmanın verdiği rahatlıkla ne işletim sistemi üzerinde OSSEC gibi bir HIDS'i, ne Cloudflare, ne WordPress ne de Nginx üzerinde bu tür saldırılara karşı (Wordfence rate limiting, modsecurity vs.) bir koruma özelliğini devreye almamıştım.

15 Temmuz 2018 tarihinde blogumu ziyaret etmeye çalıştığımda web sunucusunun geç yanıt verdiğini farkettilim. "Acaba bu defa neyi bozdum ?" diye kendi kendime homurdandıktan hemen sonra ssh ile sunucuma bağlandığımda herhangi bir yavaşlık farketmedim. Web sunucusundaki yavaşlığın uygulama katmanı ve/veya veritabanı ile ilgili olduğunu düşünerek top komutunu bile çalıştırmadan direk web sunucusunun erişim kayıtlarına (access.log) göz attığımda, 14 Temmuz saat 14:03 itibarıyla bloguma rastgele parametreler içeren çok sayıda istekte bulunduğu farkettilim. (HTTP DoS)

```

```

HTTP DoS saldırısını gerçekleştiren kaynak ip adreslerine bakıp,

Cloudflare'in ip adreslerini gördüğümde, rehabetin bedelinden çıkardığım ilk ders (lessons learned) Cloudflare'e yapılan istekleri web sunucuma göndermek (CF-Connecting-IP başlığı) oldu. :) Bir yandan saldırının tam olarak hangi ülkeden kaynaklandığını öğrenmek için Cloudflare'in Analytics sayfasındaki tehdit haritasına baktığımda DoS saldırısının Rusya'dan yapıldığını öğrendim. (Bu cümleyi yazdıktan sonra nedense aklıma Red Alert 2'deki Tanya geldi. :))

Ben bu arařtırmaları yaparken bir yandan DoS saldırısı devam ettiđi iin saldırıları durdurmak iin Cloudflare'in panelinden Under Attack zelliđini aktif hale getirdim ve saldırı anında etkisiz hale geldi. Akabinde saldırı ile ilgili istatistiki bilgiler toplamak iin ncelikle komut satırından ardından da SolarWinds'in Loggly isimli web uygulamasından faydalandım. Loggly dıřında evrimdıřı analiz iin de bir yandan Apache Logs Viewer aracının ıktılarını inceledim. Analiz sonucuna gre ~24 saatte bloguma yaklaşık ~150.000 istek yapılmıř ve bunlardan ~60.000 tanesi (502 HTTP Status) blogumu eriřilemez hale getirmiřti.

Cloudflare Dashboard Overview for mertsarica.com. Status: Active. Quick Actions menu is open, highlighting 'Under Attack Mode'.

Loggly Dashboard showing 'All Log Sources'. Popular Log Sources include Linux System Log, Linux File Monitoring, Nginx, and Apache. All Log Sources include Amazon Cloudfront, Amazon Cloudtrail, Amazon Cloudwatch Logs, Amazon Cloudwatch Metrics, Amazon Config Logging, Amazon ELB, Amazon SNS, Amazon SQS, Android, AWS, Apache, Docker, Elasticsearch, Heroku, Logstash, and Prometheus.

## File upload

### 1 Step 1: Upload Your File

You can send up to a max of 100MB per file and 1MB per event. The file should be line-separated text data, and the events can be up to 7 days old. Compressed files are not supported. You can upload a log file using common file types: .txt, .log, .csv and .json and quickly see what Loggly can do for you.

Remove any text in the filename after the file type extension. For example, a filename such as nginx-access.log is acceptable. But a filename such as nginx-access.log-20171109 will be rejected, so please rename such a file and then upload it.

The following file types are not supported:  
bin, exe, .lib, .dat, .mp3, .gif, .jpg, .jpeg, .bmp, .zip, .gz, .tar, .dll, .png, .img, .db, .lib, .pdf, .mp4, .mpeg, .mov, .jar, .pem, .crt, .doc, .xls, .xlsx, .docx, .ppt, .pptx, .dmg, .rar, .apk, and .7z

### 2 Step 2: Verify

✓ Congratulations! We received your logs and they have been automatically parsed.

### 3 Step 3: Next Steps

Update Completed 18:05:17 [0/40132] [No Filter] [Unlock](#) iannet

DoS saldırısı ile ilgili olarak, erişim kayıtları (access.log) üzerinden elde ettiğim bilgilere istinaden yapmış olduğum araştırmalar sonucunda birbirine benzeyen 3 farklı Python aracı (hulk.py , doser.py , attack.py) dikkatimi çekti. Bu araçların kaynak kodları ile bloguma yapılan DoS saldırısını karşılaştırdığımda, gelen isteklerin POST isteği olması sebebiyle doser.py aracı ile bu saldırının gerçekleştirildiği fikri ağır basmış oldu.

Blogumun WordPress yönetici paneline de göz gezdirdiğimde, Aranılan Terimler kısmındaki i\_love\_brother\_This\_is\_not\_an\_attack\_This\_is\_a\_test arama terimi dikkatimi çekti. Bu terim ile ilgili göndermiş olduğum bir tweete yapılan yorumda da olduğu gibi, blogumun DDoS testlerinde akla ilk gelen blog olabileceğini de dikkate alarak Cloudflare'in yönetim paneli üzerinden Rusya ip adreslerini engelledim.

The screenshot shows a web browser window with the URL <https://www.ultratools.com/tools/ipWhoisLookupResult>. The page title is "WHOIS IP Lookup Tool". On the left, there is a sidebar with "IP Tools" and "IPWHOIS Lookup" selected. The main content area displays the search results for IP 31.223.24.59. The results include information about the RIPE Database query service, the IP address, and the associated person: TurkNet LIR, AnkaraPOP\_XdslDynamic, Turkey-OSU, Turkey, TL143-RIPE, and assigned to NNT-TURKNET-WNT. The person's address is listed as Buyukdere Cad, Ercan Han No.121, Gayrettepe / Istanbul / Turkey.

Bana olan sevgisini sele dönüştürme konusunda ısrarcı olan bu Rus kardeşim ile sistematik olarak mücadele edebilmek ve benzer durumlarla mücadele etmek durumunda kalanlara yol gösterme adına çeşitli araçlardan faydalanmaya karar verdim.

İlk olarak gerçekleştirilen genel DoS saldırılarından hızlıca haberdar olabilmek için OSSEC HIDS yazılımını işletim sistemine kurdum. Buna ilaveten bu saldırıyı tespit edebilmek için de özel olarak bir kural hazırlayıp bu kuralı `/var/ossec/rules/http_dos_rules.xml` adı altında kaydettikten sonra kuralı içeren dosyayı da `/var/ossec/etc/ossec.conf` dosyasına kaydettim. `ossec-logtest` aracı ile de kuralın düzgün çalıştığını kontrol ettikten sonra OSSEC'i yeniden başlatıp `attack.py` ile bloguma ufak bir DoS saldırısı gerçekleştirdim. Saldırı sonucunda OSSEC başarıyla bu saldırıyı tespit edip beni e-posta ile hemen uyardı.

OSSEC HIDS ile benim sevgi dolu Rus kardeşimin DoS saldırısını tespit etmek yeterli olmayacağı için fail2ban aracı ile bu iki tür DoS saldırısını tespit eden özel bir kural yazıp, bu yazıda da belirtildiği şekilde Cloudflare

API'si üzerinden saldırganın ip adresini yasaklayan betikten faydalandım. Hazırladığım kuralı kontrol etmek için fail2ban-regex aracından faydalandıktan sonra attack.py ile bloguma saldırarak Cloudflare tarafından ip adresimin başarıyla yasaklandığını gördüm ve Rus kardeşimin yeni saldırıları için kedi fare oyunundaki yerimi sağladım. :)

```
GNU nano 2.5.3 File: /etc/fail2ban/filter.d/nginx-dos.conf
[Definition]
# Probably a HTTP Dos Attack (doser.py, attack.py or hulk.py)
failregex = ^<HOST> \- .* \("(POST|GET).*(/[A-Z]+=[A-Z]+ HTTP/1.1)" .+$

# HTTP Dos Attack (i_love_you_brother)
